Mercedes S600 Pullman Guard
With the prestigious Mercedes-Benz S600 Pullman Guard luxury limousine with integrated highest protection to level VR6/VR7, the world’s oldest automaker is continuing a unique tradition of large, armoured prestige limousines. It was 80 years ago that Mercedes-Benz became the very first car brand to develop and manufacture Pullman limousines with special protection features.

The technical basis for the Pullman limousine is the S600 Guard, the flagship Mercedes-Benz Guard model. It is powered by a silky-smooth twelve-cylinder bi-turbo engine with a cubic capacity of 5513 cc. Output is 380 kW (517 hp), with an impressive 830 Nm of torque. The suspension and basic vehicle structure have been modified, as it would be impossible to guarantee the long-term overall stability of the vehicle with its extra-long wheelbase if the lengthening process consisted of simply inserting an additional body section. The modifications also provide a solid foundation for the integration of the heavy special-protection elements. Furthermore, the state limousine is equipped with a higher rear roof for easier access and greater headroom. Four passengers can be accommodated in the rear compartment behind the partition - in comfortable seats whose face-to-face arrangement recalls the great Pullman tradition.
